

Utilization of Professional, State and Federal Design Standards for the City of Eastvale Public Right of Way

William Hemsley
Public Works Services

Background

1. Standards determine technical design of roadways and public right -of-way.
2. Prior to City Incorporation, the County used their engineering design standards.
3. Since incorporation no overall standards have been established by the City and staff has continued to use County standards.

Recommendation

Allow City Engineer to use design standards and design guidance for public right-of-way from established State/Federal agencies and professional organizations (including ASHTO, CA MUTCD, Greenbook, NACTO and Caltrans HDM)

This will allow the City Engineer to utilize design standards that best fit with the City's needs for those projects currently under design, including Hamner Place and Limonite Gap Closure.

Recommended Action

Approve Resolution delegating the determination of engineering design standards and design guidance for public right -of-way to the City Engineer
